

Nacase

Making Legal Help Accessible,
Fast & Simple

The Problem

- Accessing legal services is difficult for many people. Finding the right lawyer during urgent issues—like arrests, disputes, or contracts—is often slow, confusing, and unreliable. On the other hand, many qualified lawyers struggle to connect with clients due to limited visibility.

Our Solution

- Nacase is a platform that connects people with the right lawyers using geolocation and specialization filters. It centralizes access, makes the process faster, and gives lawyers more visibility. The result: a more transparent, efficient, and accessible legal system for everyone.

How It Works

- 1. Users search for lawyers by specialization and location.
- 2. AI assistance helps users understand their legal needs and serve as On-click legal assistants
- 3. AI assistance helps lawyers summarise cases, build cases and defenses.
- 4. Lawyers get visibility and direct client connections.
- 6. Provides case management software for Lawyers and Law firms
- 5. Secure, reliable, and user-friendly experience.

Market Opportunity

- • Millions of people face legal challenges annually in Nigeria, Africa and beyond.
- • Growing demand for accessible digital legal solutions.
- • Increasing smartphone adoption provides easy reach.
- • First-mover advantage in localized legal tech platforms.

Business Model

- • Subscription plans for Lawyers and Users
